

Table 1 Preventive screening in women of different age groups

Population (Age)	Recommended screening methods	Propose
<21	No screening	-
21~29	Cytology was screened individually every 3 years	-
30~65	None (Best), or cytology alone every 3 years (acceptable)	HPV screening alone is not recommended
>65	If the previous screening has sufficient negative results, there is no need to screen again	If the previous screening has sufficient negative results, there is no need to screen again
Female gender after the hysterectomy	No screening is required	For women with no cervix and no CIN 2, CIN 3, adenocarcinoma or cervical cancer
Women vaccinated with the HPV vaccine	Follow the screening strategy for the corresponding age	-
